Software Automation Testing Training

Quality assurance is a key component to the software development life cycle. By bringing automation testing skills to the project, employees work faster and more confidently, while keeping costs down.

With nearly 20 years of experience, TrainingRite is equipped to train the next generation of automation testers in the skills that will make them effective.

We know the tools, methods, and needs of the IT industry, and we keep up to date with the ever-evolving field and new software technologies.

Courses Offered

HP QTP / UFT

Learn advanced level VB Scripting and gain the critical skills you need to test web applications. You will create, manage, and customize data-driven framework, using Keyword and Hybrid frameworks.

Selenium WebDriver (Java or C#.NET)

Use the popular and free Selenium IDE and Selenium WebDriver to create automated data-driven tests for web applications. You will work with JUnit and TestNG frameworks, develop page objects, and run scheduled tests with ANT, and manage dependencies with Maven. Get introduced to behavior-driven development with sessions on Cucumber and Gherkin language.

Ruby Cucumber

Build a complete framework using Ruby Watir Cucumber RSpec and Capybara. Learn about behavior-driven development and test-driven development with Ruby and Rails programming language, and the common, powerful Watir and Capybara frameworks.

SoapUI / ReadyAPI

Web service software testing APIs is a special skill-set requiring proper understanding of XML, WSDL, Web Services, and other technologies. More than ever, this skill-set is a must for testers to understand. Learn to implement web service testing using the industry-leading SmartBear tools SoapUI and SoapNG Pro.

ETL Data Warehousing

Exchange, transform, and load testing is in growing demand. Learn the verification and validation techniques for new data warehouse testing, migration testing, change request, and report testing.

Java for Testers

The best automation testers are the ones with a deep understanding of programming. This course covers the essentials to Core Java and focuses on the main concepts in JDK, including object-oriented programming, encapsulation and class access modifiers, the Collections framework, exception handling, file handling, JDBC, and threads..

HP LoadRunner

Master performance testing by learning this tool and learn about load testing, volume testing, stress testing, network performance testing, web service load testing, and database performance testing.

JMeter Performance Testing

Create and implement test plans for functional testing, regression testing, and stress testing useful for JDBC, FTP, LDAP, Web Services, and HTTP.

Mobile Apps

Apps on our phones and tables are driving tomorrow's environment with the Internet of Things (IoT). Learn a variety of tools including Selenium, Robotium, Appium, and Ranorex and other tools.

Salesforce CRM

Salesforce.com has become one of the dominate players in the industry. We provide robust training for Sandbox testing, production testing, deployment testing, and other common testing methods.

Microsoft SharePoint

The complexities of this CMS and DMS web application require a lot of knowledge. Creating and sharing data over a local intranet involves ASP.NET, IIS, and SQL Server. We focus on the functional testing in areas like content types, versioning, workflows, and more.

CodedUI TFS MTM

In this course you'll learn how to build frameworks perform functional testing using MTM and CodedUI tools; you'll learn how to quickly create and execute tests and record the results with log files and video; and create bugs directly from tests, ensuring reproducibility. Together, Visual Studio 2013 Ultimate, Visual Studio Test Professional 2013, Lab Management 2013, and Team Foundation Server offer Microsoft developers the most sophisticated, well-integrated testing solution.
